

# CCN Logistical Services and Products

Document Ref: CCN-PROD-DOC-003

Design Philosophy: "Deploy. Unfold. Dominate."

## I. The "Hive-Wall" Defense System

The CIS equivalent to the Republic's SW-MB/R, but designed with the **Droideka** lineage. These are not static walls; they are semi-autonomous deployment pods.

### Type-1 "Drone" Barrier (Mobile Cover)

- **Form Factor:** A waist-high, crescent-shaped barrier made of polished Bronzium.
- **Deployment:** Transported as a compressed **sphere**. When activated, it rolls to the designated position using internal gyros (similar to a Droideka) and snaps open into a crescent shape.
- **Capabilities:** Lightweight cover for B1 Battle Droids. Sacrificial; designed to take 2-3 hits before the internal bronzium shatters.

### Type-2 "Warrior" Barrier (Shielded Firing Nest)

- **Form Factor:** A heavy, fully enclosed firing position resembling a termite mound or a large Droideka carapace.
- **Deployment:** Dropped from low-altitude transports. Upon impact, three **Tripodal Stabilization Legs** (identical to Droideka legs) drive into the ground to anchor the structure.
- **Shielding:** Features an integrated **Colicoid Bubble Shield** generator. Unlike the Republic's flat ray shields, this creates a full 360-degree dome around the unit for 30 seconds of high-intensity protection.

### Type-3 "Queen" Citadel (Command Bastion)

- **Form Factor:** A massive, immobile command structure plated in **Phrik-Lattice**. It resembles a spiraling insect hive.
- **Capabilities:** Houses a local tactical droid commander. It serves as a signal repeater for the droid army control ship.
- **Defense:** Immune to lightsabers and small arms. Can emit a high-frequency **Sonic Repulsor** pulse to shatter the internal organs of approaching organic infantry (Clone Troopers).

## II. Logistical Pods (The "Egg" Series)

CCN rejects the inefficient "crate" shape. Corners snag; spheres roll. All CCN logistics containers are ovoid "**Pods**".

## Resource Pod (Larva-Class)

- **Appearance:** Smooth, egg-shaped containers made of matte-green alloy.
- **Function:** Used for tibanna gas, raw materials, and ammunition.
- **Magnetic Clustering:** These pods feature polarized magnetic poles. They naturally "clump" together into hexagonal clusters for transport, requiring no straps or nets to secure them in a cargo hold.

## Droid Pod (Pupa-Class)

- **Appearance:** Elongated, coffin-like ovoids.
- **Function:** Pressurized deployment shells that house **B2 Super Battle Droids** or **Droidekas**.
- **Orbital Insertion:** The Pupa-Class pod can be fired directly from orbit. It features an ablative heat shield. Upon landing, the shell splits open like a hatching insect egg, deploying the droid inside fully charged and ready for combat.

# III. Exotic Services and Automata

## Sonic Dampening Architecture

CCN architecture utilizes internal honeycomb structures that naturally dampen sound.

- **Tactical Effect:** CIS bases built with CCN tech are unnervingly quiet. Clone Troopers often report being unable to hear Droid movement inside a Hive-Base until they are point-blank range.

## "Bleeder" Acid Defense

Advanced CCN barriers (Type-2 and Type-3) can be equipped with "**Bleeder**" emitters.

- **Function:** If an enemy attempts to vault or touch the barrier, sensors trigger a high-pressure spray of the **Colla IV acidic atmosphere** stored in internal reservoirs. This melts standard Clone Trooper plastoid armor in seconds.

## The "Chrysalis" Repair Station

A specialized medical/repair bay for high-value units (MagnaGuards, Droidekas).

- **Function:** Instead of using mechanical arms, the Chrysalis sprays a **Nanite-infused resin** over the damaged droid, effectively "regrowing" the lost armor plating over 6 hours.
